## Applications

## SPD4306X

15V/1.5A | 30V/6A | 30V/6A | 15V/1A

CH2&CH3 series: 60V / 6A

CH2&CH3 parallel: 30V / 12A

Total rated output power: 400W

## SPD4121X

15V/1.5A | 12V/10A | 12V/10A | 15V/1.5A

CH2&CH3 series: 24V / 10A

CH2&CH3 parallel: 12V / 20A

Total rated output power: 285W

## SPD4323X

6V/3.2A | 32V/3.2A | 32V/3.2A | 6V/3.2A

CH2&CH3 series: 60V / 3.2A

CH2&CH3 parallel: 32V / 6.4A

Total rated output power: 240W

# contents

## Basic Information

## Features & Benefits

## Competition Analysis

## Applications

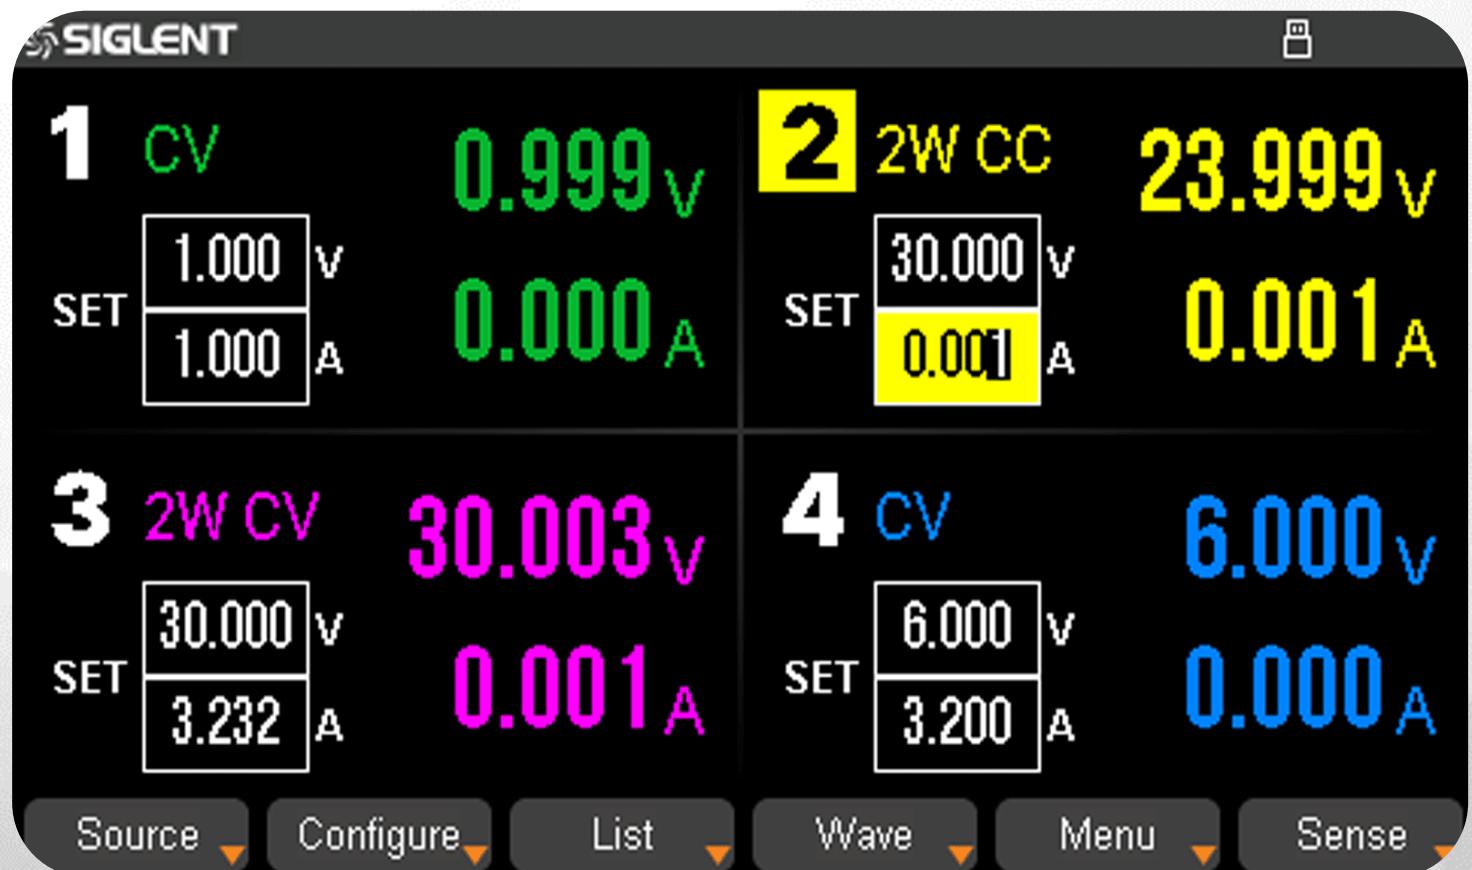

# High Resolution

5-digit voltage and current display

- Setting accuracy : 1mV/1mA
- Read back accuracy: 1mV/1mA

# Series/Parallel/Independent Mode

- ✓ Four channels can be output independently
- ✓ Turned on or off independently or all together
- ✓ CH2/3 can be switched in series and parallel with one key
- ✓ Better power output capability

# List Operation

- ✓ Supports 50-step sequence editing, 8 groups of built-in list files
- ✓ Each list can be individually set for voltage, current, time, etc.
- ✓ Import list sequence files via USB for multi-step runs

**3 Output List**

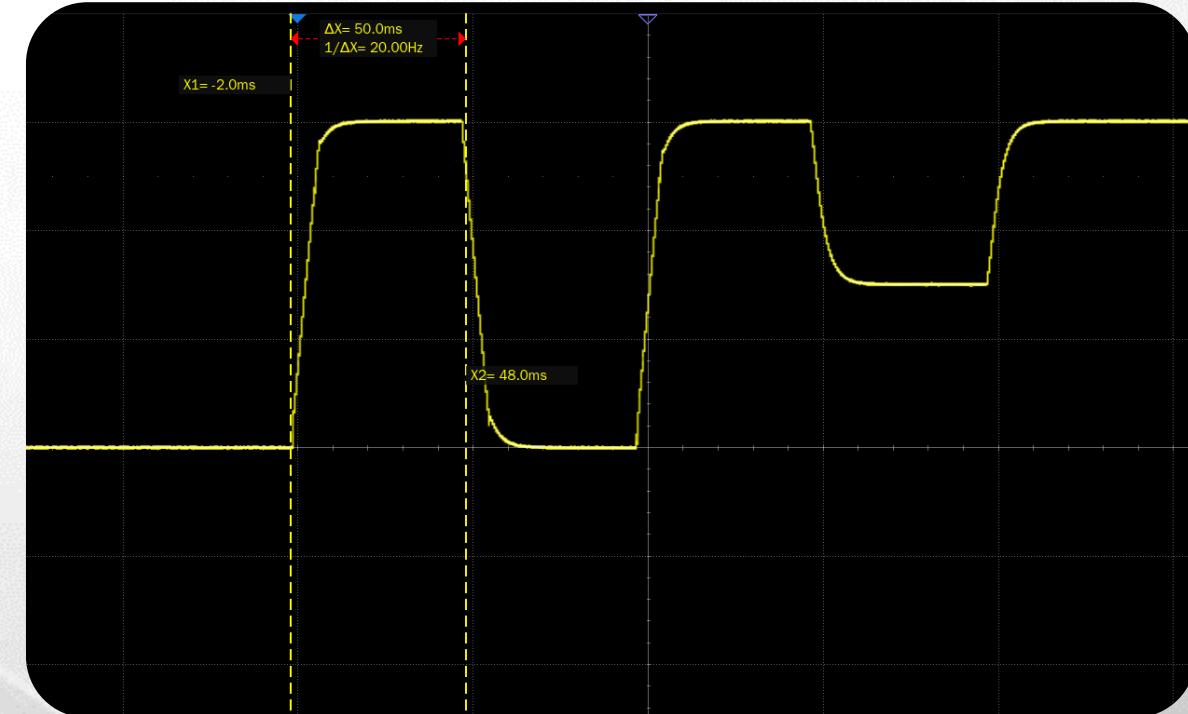

Step	Voltage	Current	Time	▲
46	15.000	1.000	4.000	▲
47	0.001	0.001	0.001	▼
48	32.320	3.232	9999.999	
49	2.000	2.000	8.000	
50	6.000	0.000	1.000	▼

Repeat Count **9999**  Continuous

Run/Stopped Pause Repeat Count Continuous Next Page Back ▲

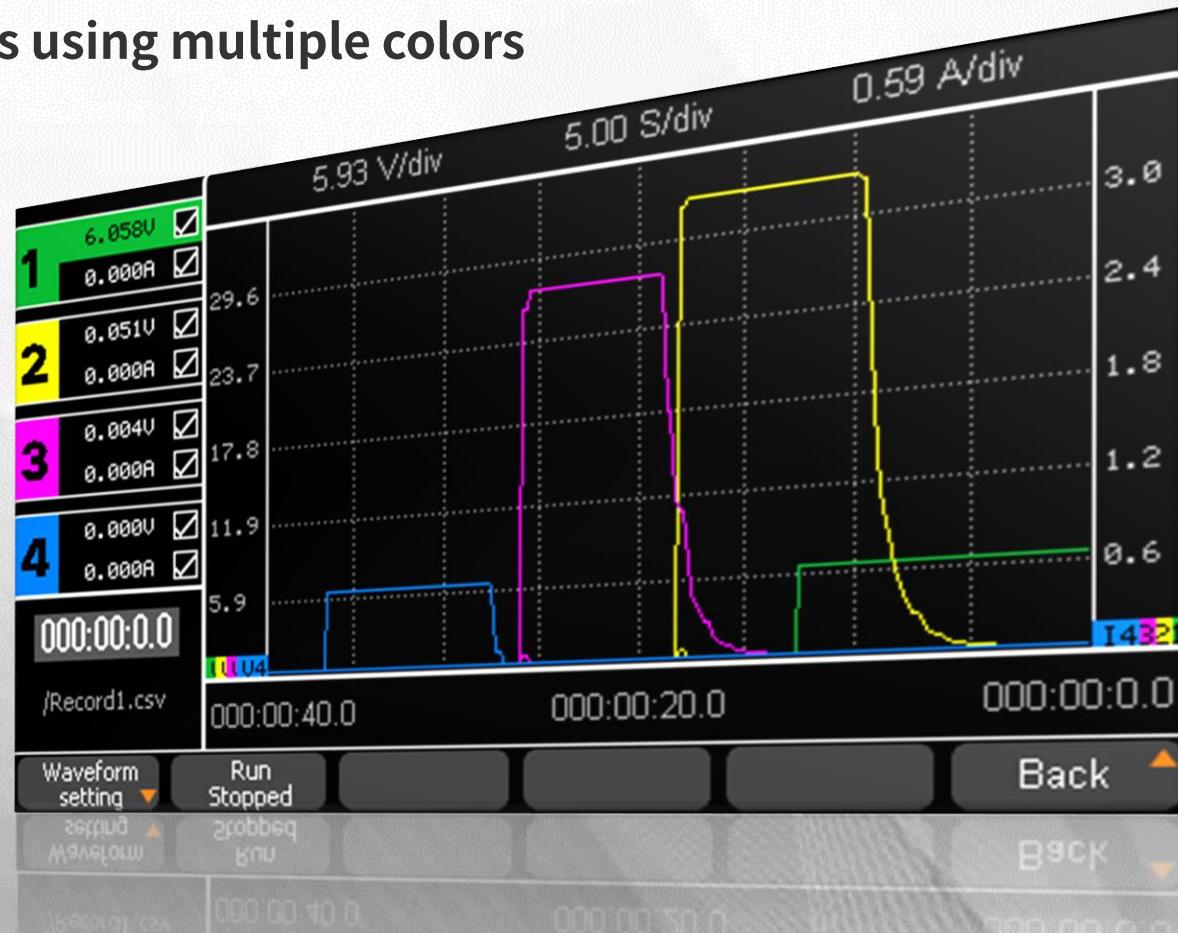

# List Operation

- ✓ Time accuracy: <50 ms
- ✓ List setting resolution : 1 ms
- ✓ Meet the user's fine requirements for pulse voltage testing
- ✓ Able to change the voltage in a very short period of time,  
realistically simulating the working condition of the  
power supply system

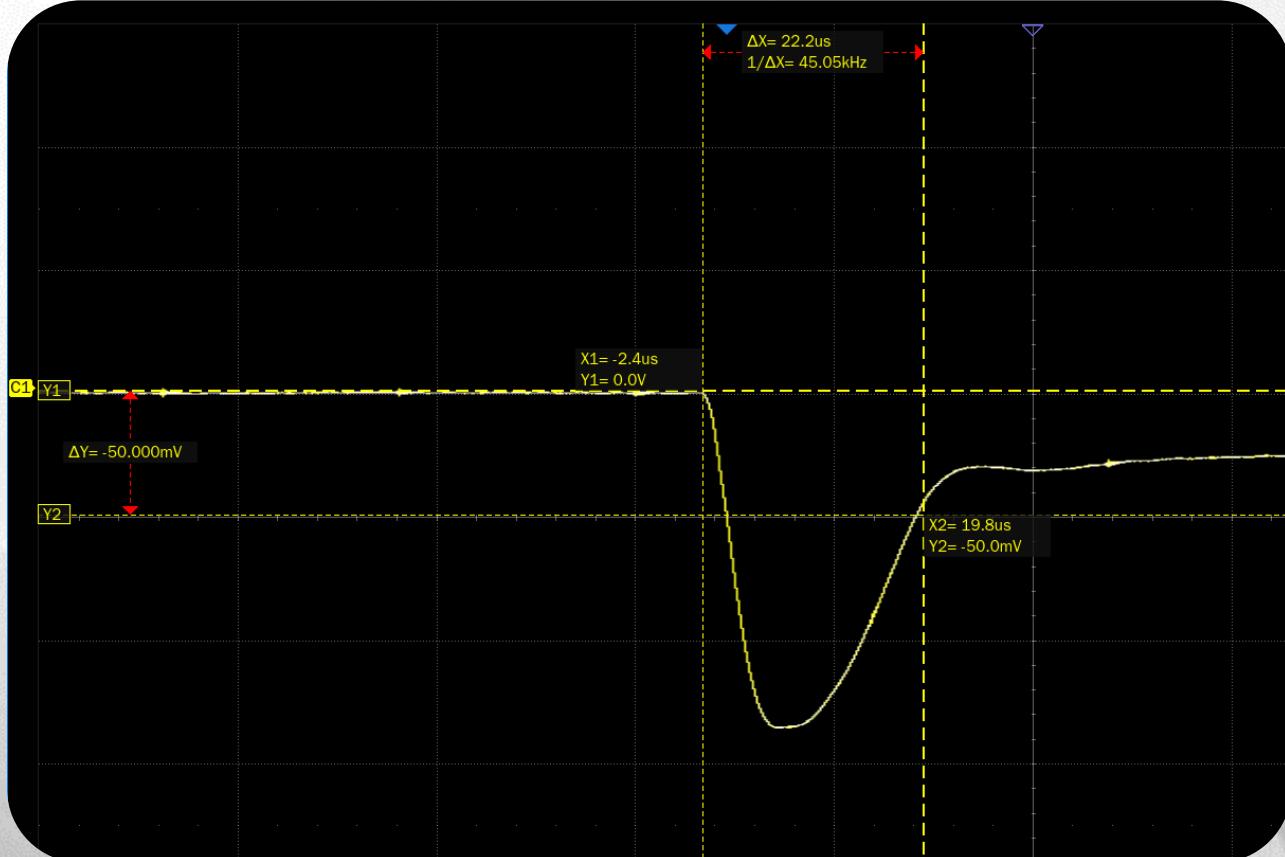

# Real Time Waveform Display

- ✓ Display voltage and current waveform operation graph
- ✓ Clear display of four-channel output status using multiple colors

# Fast Output Response Time

- ✓ **Output response:** the instantaneous change of power supply output voltage when the load current suddenly increases
- ✓ **Output Response Time:** the time it takes for the supply voltage to return to the set range when there is a sudden change in load current
- ✓ **Output response time:** < 50us

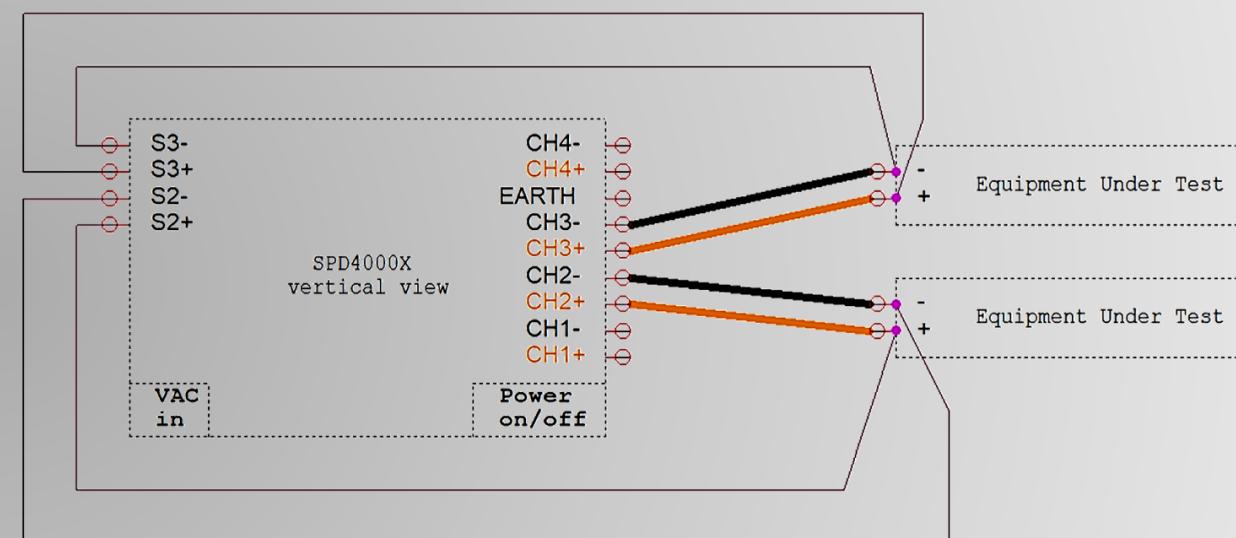

# Remote Voltage Compensation Sense Function

4W sense mode can automatically compensate for the voltage drop of the positive and negative output lines, ensuring that the voltage of the remote device to be tested is equal to the set voltage of the power supply.

- Only CH2 and CH3 can activate 4W sense mode
- Not supported in series or parallel mode
- Need to use the voltage sense connector

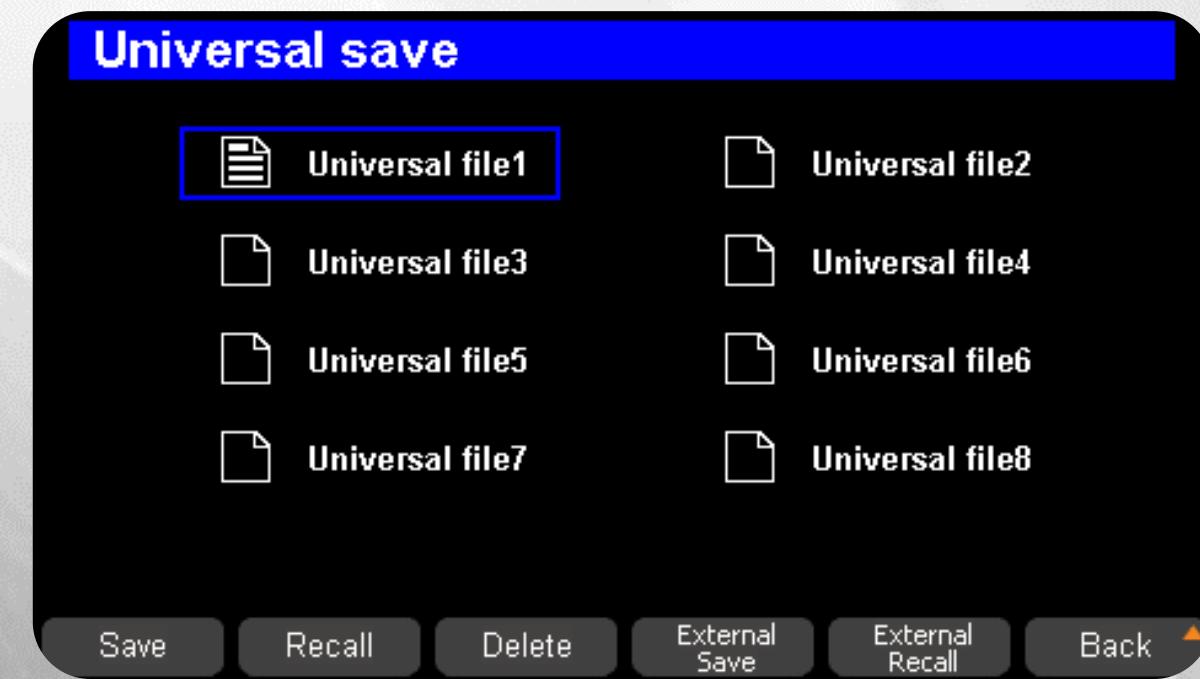

When CH2 activates 4W sense mode, it is necessary to connect the positive and negative voltage sense wires after the front panel of the machine has correctly connected the output positive and negative wires. One end of the positive voltage sense line and the negative voltage sense line are respectively connected to S2+ and S2- on the rear panel of the power supply, and the other end is correspondingly connected to the positive and negative terminals of the remote device to be tested. Similarly, CH3 also need to connect S3+ and S3-. A single equipment under test needs to connect a total of four wires.

# Save/Recall Settings Parameters

- ✓ 8 sets of built-in list
- ✓ Supports saving of output voltage/current values
- ✓ Supports saving of independent/serial/parallel output settings
- ✓ Supports local storage and external USB flash drive storage
- ✓ Recall of saved files for restoration of settings
- ✓ Long press the Save/Recall key to take a screenshot

# Multiple Interfaces

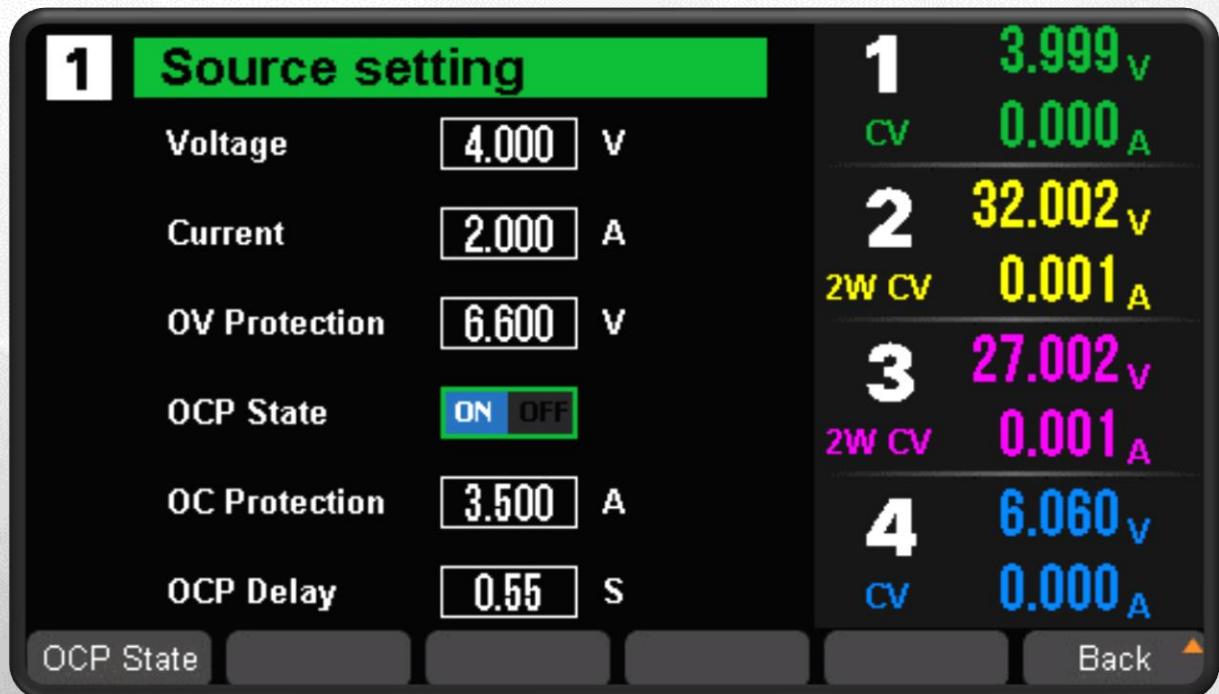

- ✓ Built-in USB, LAN standard communication interface
- ✓ Optional USB-GPIB Adapter Module
- ✓ Embedded Web Server for remote control of the power supply directly through the LAN and web page
- ✓ Remote programming via USB, LAN interface based on SCPI command set

# Protection Function

The power supply will monitor the voltage and current in the circuit in real time and automatically suspend the output to protect the circuit when the current or voltage value exceeds the set value.

- Output overvoltage protection (OVP)
- Output overcurrent protection (OCP)
- Real-time monitoring of output status

# Output Delay Function

- ✓ On/Off Delays
- ✓ Avoid high current at the moment of turning on the output
- ✓ Ideal for applications that require particularly precise power-up sequence times

# Ordering Information

Models	Description
SPD4323X	4 channels programmable linear DC power supply, 32V/3.2A, 240W
SPD4121X	4 channels programmable linear DC power supply, 12V/10A, 285W
SPD4306X	4 channels programmable linear DC power supply, 30V/6A, 400W

## Standard Accessories

USB cable	1
QuickStart	1
Calibration certificate	1
Power cord	1
3A output test cord	4

# Thank You
