## ISO KIT 415 Complete Voltage Testing Solution

- Testing kit with SP400 proving unit and VIP150 voltage tester
- SP400 generates 50Hz test voltage to verify correct readings
- First AC waveform generating proving unit for accurate testing
- Battery-powered proving unit for on-the-go testing
- Voltage readings displayed in six steps by the VIP150: 6-12-50-120-230-400V
- User-friendly, battery-free voltage testing
- SAFE CASE comprises of separate compartments
- Case contains clear front and pre-cut holes to allow easy access to proving unit functions
- Reliable and efficient means of complying with safe working practices

### Description

The ISO KIT 415 is a comprehensive testing kit for electricians that includes the Socket & See SP400 proving unit and VIP150 voltage tester.

The SP400 is a battery-powered proving unit designed to verify the accurate functioning of multimeters, voltage indicators, and non-contact voltage detectors. It generates a 50Hz test voltage to replicate a genuine test at AC mains supply frequency, ensuring correct readings when using the AC range of your testing equipment. The SP400 is a reliable and efficient means of checking electrical testing equipment in compliance with the Working Practice for electricians.

The VIP150 voltage tester is user-friendly, battery-free, and capable of measuring both AC and DC voltages. Designed and built with a CAT IV 600V safety standards and in accordance with BS EN61010 and HSE GS38 safety standards, it displays voltage readings in six steps; 6-12-50-120-230-400V. Its space-saving design and incorporated safety features make it simple to use for quick on-site checks.

The kit also includes the Socket & See SAFE CASE,

which has two separate compartments for storing the VIP150 voltage tester and the SP400 proving unit. The rear compartment provides protection for any Socket & See voltage indicator, while the smaller front compartment houses the proving unit. The proving unit section has a clear front with pre-cut holes, allowing easy access to all functions without removing it from the case.

Ultimately, the ISO KIT 415 offers electrical technicians an exhaustive solution for testing electrical systems, as it includes essentials such as the SP400 proving unit and VIP150 voltage tester. With its all-in-one diagnostic package, it caters to a wide range of testing demands, presenting itself as an optimal safe isolation kit.
