Description

The ISO KIT 420 is an advanced electrician's testing kit featuring the Socket & See SP400 proving unit and the VIP200 voltage tester, designed for comprehensive electrical system assessments.

The SP400, a battery-operated proving unit, ensures the accuracy of multimeters and voltage detectors by generating a 50Hz test voltage that simulates an AC mains supply frequency. This tool is essential for maintaining compliance with electrician Working Practices by verifying the precision of electrical testing equipment.

The VIP200 replaces the VIP150 in this kit, enhancing its capabilities with features like two-pole voltage indication, continuity testing, phase rotation, and a single-pole test facility. It offers automatic AC/DC selection, LED and audible continuity indication, and phase rotation for three-phase systems. The VIP200 includes an Auto Test function for battery status, displays voltage across a broad range (12, 24, 36, 50, 120, 230, 400, 600V), and meets robust safety standards (IEC 61249-3, 61010-1, IP54).

Accompanying these tools is the Socket & See SAFE CASE, which provides dedicated storage for both devices. The case is organized into two compartments for easy access and protection of the equipment, allowing for efficient function checks without removing them from the case.

In summary, the ISO KIT 420 offers electricians a superior toolset for safe, accurate, and comprehensive electrical testing, making it an essential kit for professional electrical diagnostics.
