

SOCKET & SEE™

ISO KIT 220 Voltage Testing and Lockout Solution

- VIP200 includes functions like continuity testing and phase rotation detection
- Voltage indicator also features a built-in flashlight for illumination in low-light environments
- SP200 works with any Socket & See voltage tester and is lightweight
- SAFE CASE is engineered to be durable and impact resistant
- Ideal all-in-one test kit for electricians and contractors
- Units boast ergonomic and lightweight designs
- Cost-effective voltage testing and safe isolation solution
- Units boast easily interchangeable, AAA battery power
- Bright LED indicators for visual alerts

Description

The Socket & See ISO KIT 220 is a complete testing kit for electrical contractors and electricians. It comprises two crucial devices: the Socket & See VIP200 Voltage Indicator and the SP200 Proving Unit. These instruments support the assessment of electrical systems and ensure their safety compliance.

The VIP200 is a versatile voltage indicator with advanced features such as continuity testing, phase rotation detection, and single-pole testing. The included Auto Test button verifies battery condition, while the tester itself can detect AC voltages from 100VAC. Two-pole voltage indication can be conducted without batteries installed. It is IEC 61243-3/61010-1 safety compliant, and can also indicate voltage between phases, making it an invaluable tool for three-phase systems.

The SP200 Proving Unit is a cutting-edge solution to guarantee the precision of your multimeters and voltage indicators. It integrates seamlessly with any Socket & See voltage tester and battery power to produce authentic AC waveforms. With its compact construction and user-friendly design, this device is an ideal companion for individuals dealing with perilous electrical systems.

The kit includes a sturdy SAFE CASE that offers secure storage and transportation for the apparatus, eliminating worries of damage or misplacement during transit. The case has a clear front and two compartments, with pre-cut openings that provide quick access to the proving unit without removal from the case.

Professionals involved in the installation, maintenance, and repair of electrical systems should consider the ISO KIT 220 for its top-notch safety features. The VIP200 and SP200 comply with best practice guides for safety standards to ensure user protection, while the SAFE CASE offers dependable and robust equipment transportation.
