

SOCKET & SEE™

LOCK KIT 215 Comprehensive Electrical Safety Kit

- All-in-one kit for voltage testing and lockout/tagout
- Includes VIP150 Voltage Tester and SP200 Proving Unit
- VIP150 is compact and measures AC/DC voltage in six steps with a silicone lead
- SP200 is a portable voltage checker for verifying two-pole testers
- Lock-off devices boast a customisable 3-digit combination for securing electrical installations
- SAFE CASE designed to offer secure storage for components
- Pre-cut holes in the case allow easy access to the proving unit
- Complies with safety standards BS EN61010 and HSE GS38
- Reliable and efficient for safe voltage testing and lockout/tagout procedures for electrical professionals.

Description

The Socket & See LOCK KIT 215 is an indispensable all-in-one voltage testing and lockout/tagout kit designed for electricians, contractors, and maintenance teams working with electricity. This comprehensive kit ensures safe and efficient operations, including the VIP150 Voltage Tester and the SP200 Professional Proving Unit, which enhance both safety and compliance on site.

At the heart of this kit is the VIP150 Voltage Tester, a battery-free device that accurately measures AC/DC voltages across six levels. It features robust, wear-indicating silicone leads and a compact design, making it ideal for professionals who require reliable voltage testing tools. Complementing the VIP150 is the SP200 Professional Proving Unit, a portable device essential for verifying the accuracy and functionality of two-pole voltage testers, ensuring electrical testing is both safe and precise.

The kit also includes three sturdy locking devices with customisable 3-digit combination locks to secure electrical installations and prevent unauthorised access. These devices—the MCB LOCK, PLUG LOCK, and FUSE LOCK—are designed to fit most MCBs, any

3-pin 13 Amp UK plug, and any fused spur socket, respectively. Each lock is crafted to meet rigorous safety standards, offering an added layer of security and compliance in electrical settings.

The entire LOCK KIT 215 is neatly housed and transported in a SAFE CASE, a robust case with a transparent front that allows for quick visual checks and easy access to tools. This case not only protects the tools under challenging site conditions but also features pre-cut holes for immediate access to the proving unit, facilitating the setup process. With its compact design and inclusion of critical safety features compliant with BS EN61010 and HSE GS38 standards, the LOCK KIT 215 is the perfect solution for industry professionals prioritising safety and efficiency in voltage testing and lockout/tagout procedures.
