## Overview

SIGLENT's SDG2000X is a series of dual-channel function/arbitrary waveform generators with specifications of up to 120MHz maximum bandwidth, 1.2GSa/s sampling rate and 16-bit vertical resolution. The proprietary TrueArb & EasyPulse techniques help to solve the weaknesses inherent in traditional DDS generators when generating arbitrary, square and pulse waveforms. With advantages above, SDG2000X can provide users with a variety of high fidelity and low jitter signals, which can meet the growing requirements of complex and extensive applications.

## Characteristics

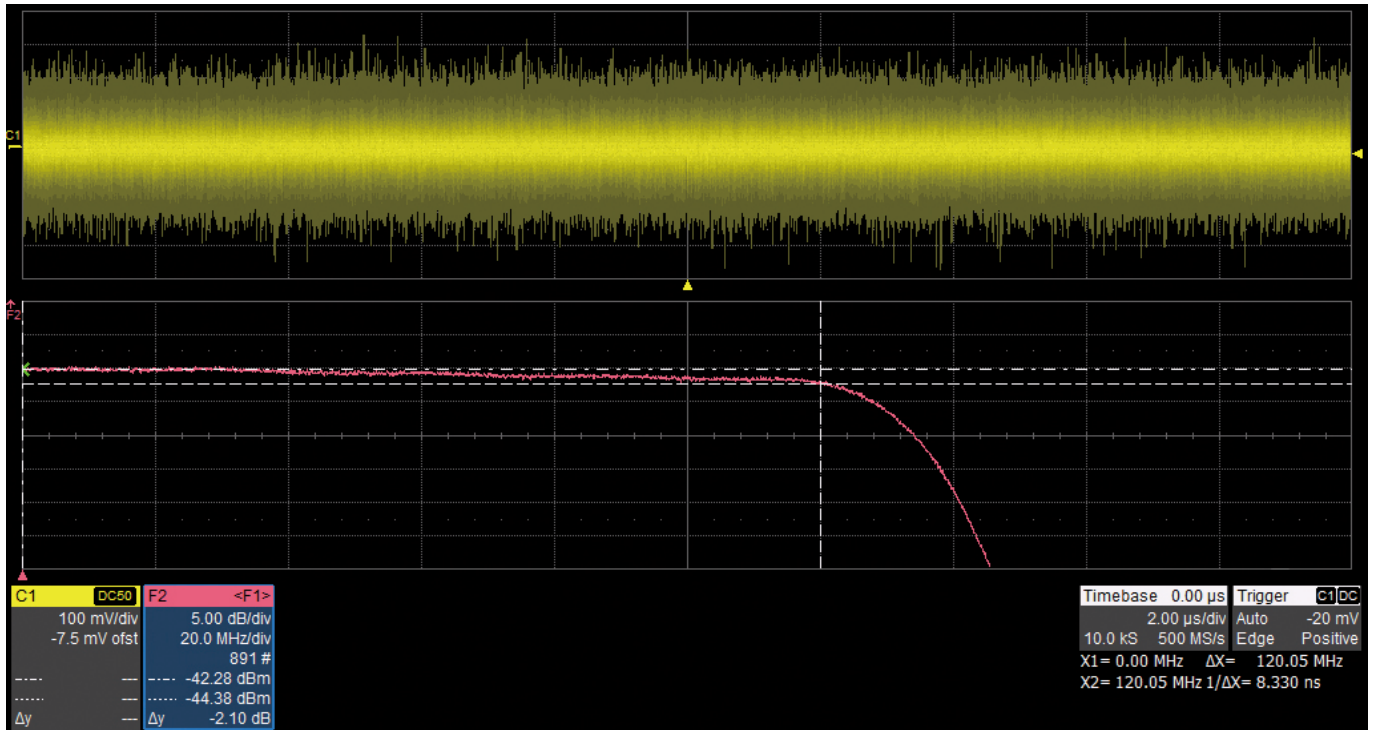

### High-performance Sampling System

Benefiting from a 1.2GSa/s and 16-bit sampling system, SDG2000X achieves extremely high accuracy performance in both time domain and amplitude, which results in more accurately reconstructed waveforms and lower distortion.

# Characteristics

## Excellent Analog Channel Performance

▲ The bandwidth of analog channels proves to be greater than 120MHz, via doing a frequency response test with white noise.

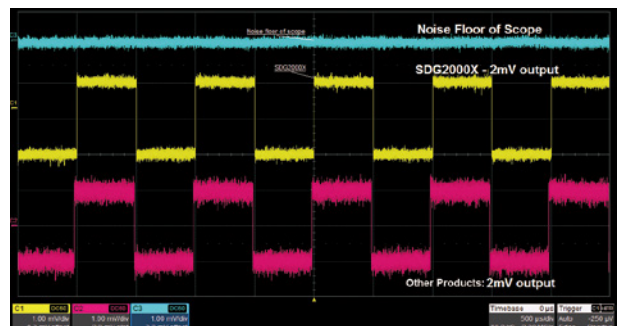

◀ High fidelity sine output. Almost no spurious observed @60MHz, 0dBm.

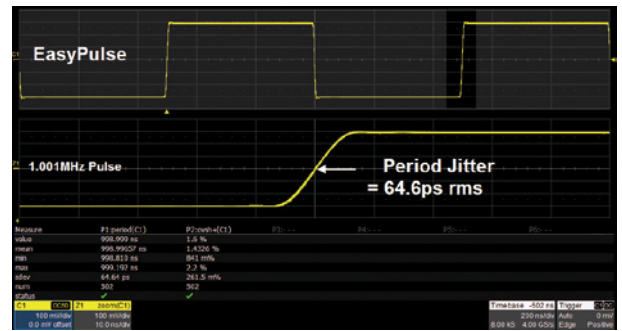

▶ Capacity of outputting large signal at high frequency. Dual-channel, 20 Vpp amplitude can be guaranteed even @20 MHz.

▶ Low noise floor, improves signal-noise ratio.

## Innovative EasyPulse Technology

When a Square/Pulse waveform is generated by DDS, there will be a one-clock-jitter if the sampling rate is not an integer-related multiple of the output frequency. SDG2000X EasyPulse technology successfully overcomes this weakness in DDS designs and helps to produce low jitter Square/Pulse waveforms.

The Pulse width can be fine-tuned to the minimum of 16.3ns with the adjustment step as small as 100ps.

The rise/fall times can be set independently to the minimum of 8.4ns at any frequency and to the maximum of 22.4s. The adjustment step is as small as 100 ps.

## Innovative TrueArb Technology

For arbitrary waveforms, TrueArb not only has all the advantages of traditional DDS, but also eliminates the probability that DDS may cause serious jitter and distortion.

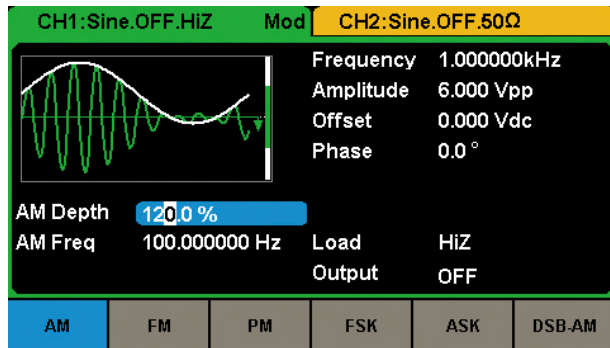

TrueArb generates arbitrary waveforms point by point, never skips any point so that it can reconstruct all the details of the waveform as defined.

As with EasyPulse, TrueArb effectively overcomes the defect that DDS may cause the one-clock-jitter in arbitrary waveforms.

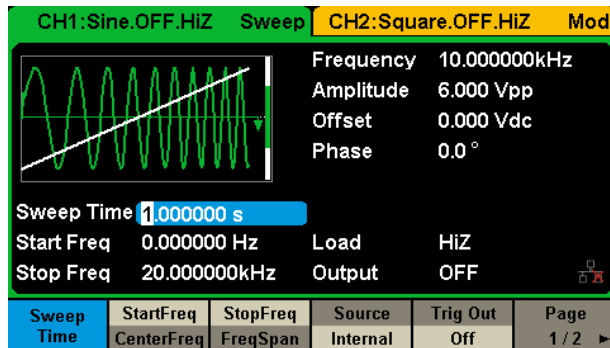

## Characteristics

### Modulation

SDG2000X supports plenty of modulation types, such as AM、FM、PM、FSK、ASK、DSB-AM, and so on. The modulation source can be configured as "Internal" or "External".

### Sweep

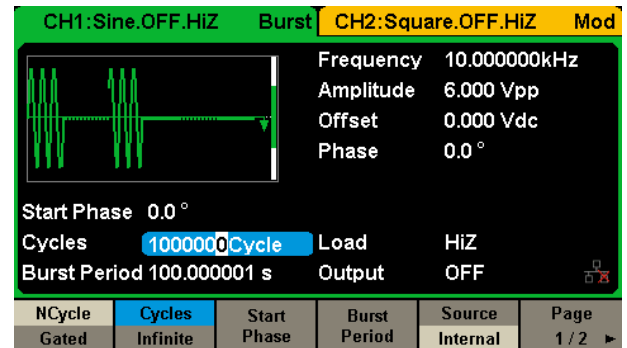

SDG2000X supports two Sweep modes, "Linear" and "Log". Two Sweep directions, "Up" and "Down" and three Sweep sources, "Internal", "External" and "Manual".

### 4.3" Touch Screen Display

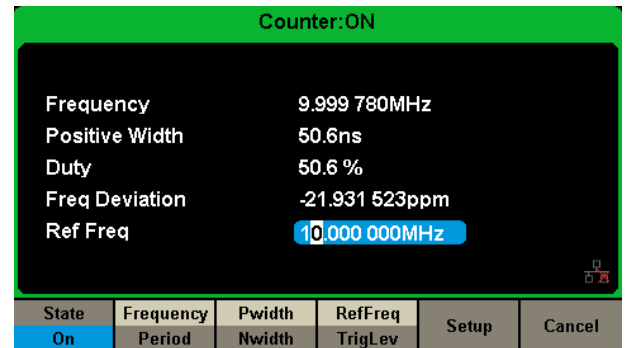

4.3" touch screen display, makes operation much more convenient.

### Burst

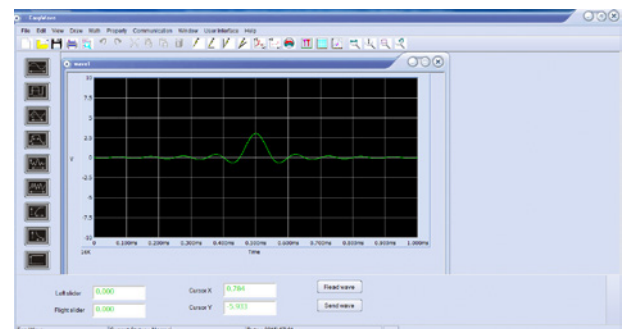

SDG2000X supports two Burst modes, "N cycle" and "Gated". The Burst source can be configured as "Internal", "External" or "Manual".

### Frequency Counter

High precision Frequency Counter with an input frequency range of 0.1Hz~200MHz.

### Arbitrary Waveform Software EasyWave

EasyWave is a powerful arbitrary waveform editing software that supports several ways to generate arbitrary waveform such as manual drawing, line-drawing, equation-drawing, coordinate-drawing, etc. It is quite convenient for users to edit their own arbitrary waveforms through EasyWave.
