

LOKKIT6

Universal fuse carrier lock out kit

Key features

The 4 item kit includes:

- Universal fuse carrier lock off (LOK6)
- Padlock with unique key (PAD11RD)
- “Equipment locked out” tags which can be written on (TAG4)
- Black marker pen (LOKMP)

The LOKKIT6 includes everything needed to lock off fuse carriers as part of a safe isolation procedure. Safe isolation procedures are essential to achieve compliance with the Electricity at Work Regulations and ensure that workers on site are not exposed to danger when working on or near to electrical systems.

The kit includes the LOK6 universal fuse carrier lock off, a single TAG4 (Size: 80 x 140mm) warning tag and marker pen, plus a PAD11RD padlock.

The LOK6 is designed to restrict finger access to live contacts and prevent the reinsertion of a fuse whilst maintenance is in progress, it is ideally suited to Red Spot and other similar style fuse holders.

Easily adjustable to fit fuse holders from 20A to 100A, the LOK6 provides a “one size fits all solution” saving time sourcing the right device for the job.

Manufactured without any metal parts, the LOK6 is constructed from a resilient flame-retardant blend of Polycarbonate and ABS for high impact strength and long term durability. The new locking off device from Martindale Electric is quick to install without the need for any tools and is easily identifiable through its distinctive yellow colour.

Keeping You Safe

LOKKIT6

Universal fuse carrier lock out kit

Specifications

LOK6 Universal fuse carrier isolation lock
